Aims and Scope:

Health Systems is a multi-disciplinary journal promoting the idea that all aspects of health and healthcare delivery can be viewed from a systems perspective. The underpinning philosophy of the journal is that health and healthcare systems are characterized by complexity and interconnectedness, where “everything affects everything else.” Thus, problems in healthcare need to be viewed holistically as an integrated system of multiple components (people, organizations, technology and resources) and multiple perspectives. This creates a need for a journal to serve as a bridging factor. Health Systems provides a forum that brings the different disciplinary viewpoints and research approaches together in discussion.

Online Features:

• Complete online archive available from 2012.
• Advance online publication - definitive, citable version of papers (complete with DOI) available online ahead of print.
• A subscription to the related European Journal of Information Systems (see page 21) includes a subscription to Health Systems. Health Systems is also available as a standalone journal.
• Health Systems is included in Palgrave Open which gives authors of accepted papers the option to publish their articles with immediate open access upon publication. See page 53. Palgrave Open articles published to date:
  - Emergency planning and management in health care: priority research topics
  - Essential medicines in Tanzania: Does the new delivery system improve supply and accountability

Users also benefit from all the online features outlined on page 3
