

CALL FOR PAPERS

Human-Centered Information Visualization

A Special Issue of Information Visualization, Volume 8, Issue 3

Information visualization is for the eyes and minds of human beings. While visualization and mapping algorithms play a significant role in creating structures and views for the abstract information that otherwise difficult to “see”, viewers should always be in control of the whole visualization process. The viewers need to be able to choose the most appropriate visualization techniques or display formats for their specific information tasks. They need to interact with visualization results and initiate new visualization processes according to their information needs. They need to customize visualization tools to support their thinking, understanding, and collaboration. These are some of the themes that emerged from recent research on information visualization. Indeed it is important to include human cognition and intelligence throughout the visualization process and to invite humans to be in the driver-seat when they use the visualization results for learning, exploration, and understanding.

Information visualization is rapidly moving from algorithm-driven visualization to human-centered visualization. In this special issue, we seek original research and application development papers that explore the roles of humans in the process of information visualization. Topics may include, but are not limited to:

- Adoption of techniques and methodologies of human-centered computing to information visualization
- Prototypes, tools, and applications of mixed-initiative information visualization systems
- Empirical results on human-driven information visualization processes
- Design of user-centered visual structure and representations
- Collaborative visualization
- Human-computer collaboration in information visualization
- Comparisons of human-generated vs. algorithm-generated visual representations
- Theories on human intelligence in the visualization process

Paper Submissions

- **Submissions due:** ~~15 October 2008~~ **New Deadline: 31 October, 2008!**
- **Acceptance notices:** 15 January 2009
- **Final revisions due:** 15 March 2009
- **Publication:** 1 September 2009

Enquiries should be made to any of the guest editors. Authors should inform the guest editors of their intent to submit before submitting a manuscript. Electronic submissions of manuscripts in PDF or Word (97 or later) are recommended via email to:

Dr. Xia Lin
xlin@drexel.edu
The iSchool@Drexel
College of Information Science
and Technology
Drexel University
Philadelphia, PA 19104
U.S.A.

Dr. Andreas Kerren
andreas.kerren@vxu.se
Växjö University
School of Mathematics and
Systems Engineering
Computer Science Department
Vejdes Plats 7, Room B323
SE-351 95 Växjö, Sweden

Dr. Jiajie Zhang
jiajie.zhang@uth.tmc.edu
School of Health Information
Sciences
University of Texas at Houston
7000 Fannin, Suite 600
Houston, TX 77030
