Scope and coverage

- The Journal of Information Technology (JIT) brings together the best new research addressing social, organisational and managerial aspects of digital systems and new information technologies. Of equal interest are emerging technologies and their deployment and the development of foundational concepts and theories to support the use of new and established platforms, systems and applications.

- The objective of the journal is to publish papers that advance knowledge, consolidate our understanding, stimulate new ideas, and take forward debates and controversies. The journal particularly appreciates contributions that explain and demonstrate practical application.

- The journal publishes work from all disciplinary, theoretical and methodological perspectives.

- JIT is published on behalf of the Association for Information Technology Trust.

Editors-in-Chief

- Leslie Willcocks, London School of Economics - willcockslp@aol.com
- Chris Sauer, University of Oxford - chris.sauer@gtc.ox.ac.uk

Readership

- Researchers, scholars, teachers and advanced students in the fields of Information Systems and Information Science based in Business and Management Schools, Faculties of Commerce, and Schools of Media and Communication.

- The Journal will also be of value to reflective practitioners including IT developers, consultants, software vendors and senior IT executives seeking an update on current experience and future prospects in relation to contemporary information and communications technology.

*2014 Journal Citation Reports® (Thomson Reuters 2015)
Submission, review and publication process

Metrics

- 30-35 papers published per year
- 6-7% Acceptance Rate
- 4 Issues per volume

Decision times and publication times:

- The Journal normally makes a final decision no later than the second round of reviews
- Papers are published on-line within weeks of acceptance
- Accepted papers usually appear in print in the same year that they are accepted

JIT regularly covers:

Journal of Information Technology Teaching Cases (JITTC) is the sister journal to JIT, sharing the same editorial team and rigorous standards. JITTC features current, peer-reviewed case materials for academics, scholars and professional instructors who want real examples on which to base teaching on contemporary information and communications technology themes.
